

SCAM BA 'TO?

Philippine scam-message decision-support platform

Developer & Project Lead: John Clement S. Escobañez, MSIT

Media: jsescobanez@national-u.edu.ph

Website: scambato.org

WHAT IT DOES

A user pastes a suspicious message and receives calibrated Red, Yellow, or Green guidance, an explanation of the observed behavior, and independently verified official channels when available. The system is designed to avoid treating every OTP, payment notice, or urgent message as automatically fraudulent.

77	Gold verified entities	648	Recognition entities
716	Organization-intelligence profiles	186	Verified destinations
211	Verified organization facts	94	Source-grounded cases

BENCHMARK TRANSPARENCY

48,000 controlled benchmark executions are validation cases, not 48,000 independent real-world scam reports. The benchmark includes 16,447 exact-unique messages and 6,144 behavioral representatives.

HOW THE DECISION WORKS

The checker separates organization recognition from sender authentication, evaluates requested actions and transaction context, inspects links and domains, applies behavioral scam indicators, and surfaces verified organization guidance. Recognition of a real organization does not authenticate the sender.

PUBLIC POSITIONING

Scam Ba 'To? is independently developed. John Clement S. Escobañez is academically affiliated with National University - Manila; that affiliation is biographical and does not imply institutional endorsement, ownership, or responsibility unless separately stated by the University.
